Hi! I'm Kian Boncilli.
I'm 15 years old and already working in the Web3 space and as a UI/UX Design for about 4 years.
Being a double citizen of the United States and Italy I was given the opportunity to experience diverse cultures and environments. I am currently in my second year of high school and I am a dedicated homeschooler perusing Web3 studies, which it will be my primary focus and it is becoming already my profession.
I have a strong commitment to self-study and personal projects, which have allowed me to develop proficient skills in UX/UI design and coding.
I am fascinated by programming languages and have a deep understanding of the potential impact of Web3 on the future of technology.

I have also actively engaged in creating AI art, showcasing my creativity and innovation in the digital space.
I also collaborate with my mom who is a photographer and digital designer and a SheFi member through our Studio Lab called K|B lab. I have also been designing web sites for some clients, I'm currently collaborating with a start-up with a great group of Teens in the USA, with whom I had previously collaborated on a web design. I am currently creating my own NFT collection witch includes its website and whitepaper.
I have also successfully concluded an Harvard course with Timothy R. James for Python users and my skills in Figma and coding allowed me to become part of the start up that recognized my abilities and creativity.
Outside of my academic pursuits, I am an avid sports and health enthusiast belonging to the 5 am club. I am a member of a baseball team and I do archery and swimming. These sports have instilled discipline, focus, and physical fitness in me but have also enhanced my ability to work well within a team and communicate effectively.
